

Dew condensation Sheet

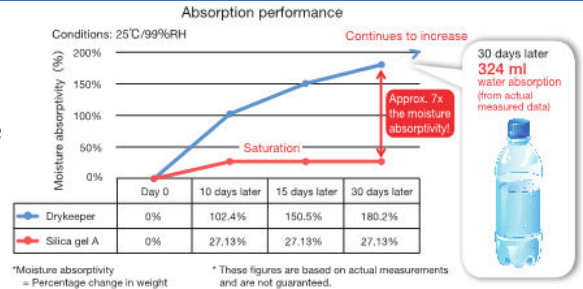

NBD-○○○○

F-CO DK Sheet®

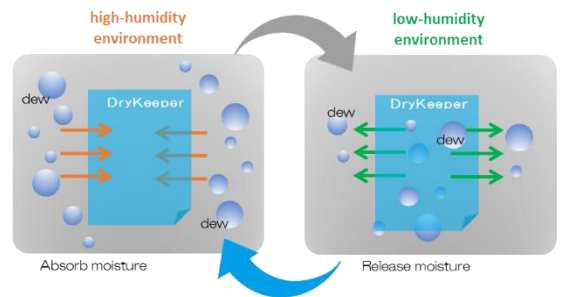

Excellent moisture absorption

F-CO DK Sheet is made of a compound of synthetic rubber and super absorbent polymer. So, F-CO DK Sheet can absorb the moisture much more than that of Silica gel, which shows the ability of excellent dew condensation.

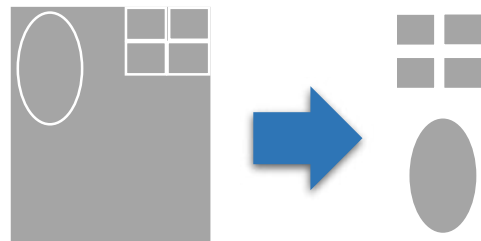

Restoring ability lead to long-term use

When the moisture humidity is high, the sheet absorb the moisture, and the humidity is low, the sheet release the moisture into the air. By this reversibility the sheet can restore moisture absorption ability at the time of low-humidity.

Processing optional shape and size

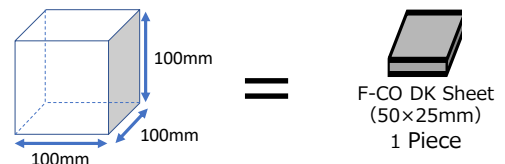

F-CO DK Sheet is 630mm×600mm and it enables you to process optional shaped size. You can name and sell it on your own. ※We recommend that you cover the sheet with such as non woven fabric to avoid getting wet with water.

Processed example

Realizing a large effect in space saving

1000cm³ of saturated water evaporation is 4.78g and the size you need is 50mm×25mm. Please contact us about your use environment. We will propose that to you in detail.

Cautions

- ※Please store the Sheet in a air-permeable, cool, dark place and be careful not to get wet with water before, after processing.
- ※Allowable temperature is -30°C to 80°C.
